

LVS-7000

Four areas of interest

Nine areas of interest

Sixteen areas of interest

AutoScan Module

The AutoScan module allows an operator to simultaneously monitor and analyze up to 16 areas of interest per job on the web without having to manually move between each area of interest. While a job is running, an operator can choose to view all of the areas at once or cycle between full image views of each location; this allows the operator to keep track of the printing process while the LVS-7000 is inspecting all of the labels for defects. If defects are detected, AutoScan can help the operator quickly identify what is going wrong by finding the affected area of the web and going into "Freeze" mode to concentrate on that area of the image for analysis.
